Hi all, the engineering team want to let you know that we have restored all the data from Topher's HD and corrupted files from legacy projects. If you have any projects that need to run script (for reupload doc), please let me know.

[@mahreen](#) we should have the script run for the list of users with recent activity now right?

Before we restored the data there were 1.5 million corrupted files between 2007 and 2020. Now there are only 250k corrupted files in this time period.
In total there are 2.4 million recordings that are corrupted — so that's around 2% of our entire database.
